## Biologic Architecture: Choice of Material

- The work of biology is to get molecules arranged into a fractal- this accomplishes perfected (non-destructive) distribution of charge - called LIFE. Thus relative fractality (self-similarity) in the charge field allows us to define which building materials can fabricate a structure which causes - life, seed germination, bliss. (Measuring success in Architecture)

Finally, the third iteration provides a structure that could be the overhead view of the whole settlement. Note that the self-replicating line off-center is the position of the altar in the house, and the position of the village altar in the chief's family ring: a resonance between spiritual notions of endless renewal, mathematical models of self-replication, and physical structure that we see in many of the fractal village architectures of Africa.

A large group of approximately 250 people, including men, women, and children, are posed on the wide stone steps of a large, multi-story brick building. The building features a prominent 'U' logo on a blue square sign. The group is arranged in many rows, filling the steps from the foreground to the background. The scene is brightly lit, suggesting a sunny day. The text overlay is positioned in the upper right quadrant of the image.

- Our 2009 International Conference on
- Biologic Architecture
- Oct- in Cardiff, Wales

BioArchitecture harnesses and replicates the principles found in nature in order to create built environments which affect people and other living things. Although many people are aware of the aesthetic beauty of buildings which are influenced by natural forms and built with natural materials, the full effect of designing in accordance with nature is not widely understood. The central canon of BioArchitecture is that all life responds well to design that is energetically harmonious with nature.

In studying the environment necessary to support life, it may be possible to redefine the function of architecture as a discipline which enables people to build spaces which have a physically positive effect on living things. There is evidence of this craft being rediscovered time and again throughout recorded history, and awareness of the deeply fascinating connections between the animate and the inanimate is once again demanding our attention.

The BioArchitecture Foundation was created to allow the quick dissemination of information in this field as it unravels. We encourage you to not only study the information we offer, but also to participate in the forum, competitions, and to contact us with material from your own research which we may post on this site. Please come back to check this site for new reports, news and upcoming events.

Do you ever wonder why migrating animals such as birds, salmon, and whales, to name a few, never seem to meander off course and get lost? The answer, according to a couple of new studies, may be that those migration routes and navigation skills are hard-wired into the animals' brains.

Studies of loggerhead turtles revealed that hatchlings have an innate sense of the direction and strength of Earth's magnetic field, which they use for navigation and migration route.

### Seeing the Magnetic Map

European robins see the Earth's magnetic fields with their right eye to guide their seasonal migration.

Wolfgang Wiltschko at Goethe-Universität and his colleagues at Ruhr-Universität, Germany, tested each eye of the European robins and found that magnetoreception is dependent on right eye input.

In birds, detecting magnetic fields depends on the visual system. The retina may contain both visible light sensors and magnetic field sensors. Both kinds of sensors activate neurons within the visual signaling pathway.

The right eye sends its information to the left hemisphere of the brain. Seeing the magnetic map is a left brain function.

*Habitat ambience & Ecological balance*

BY BERNARD L. KRAUSE, Ph.D.

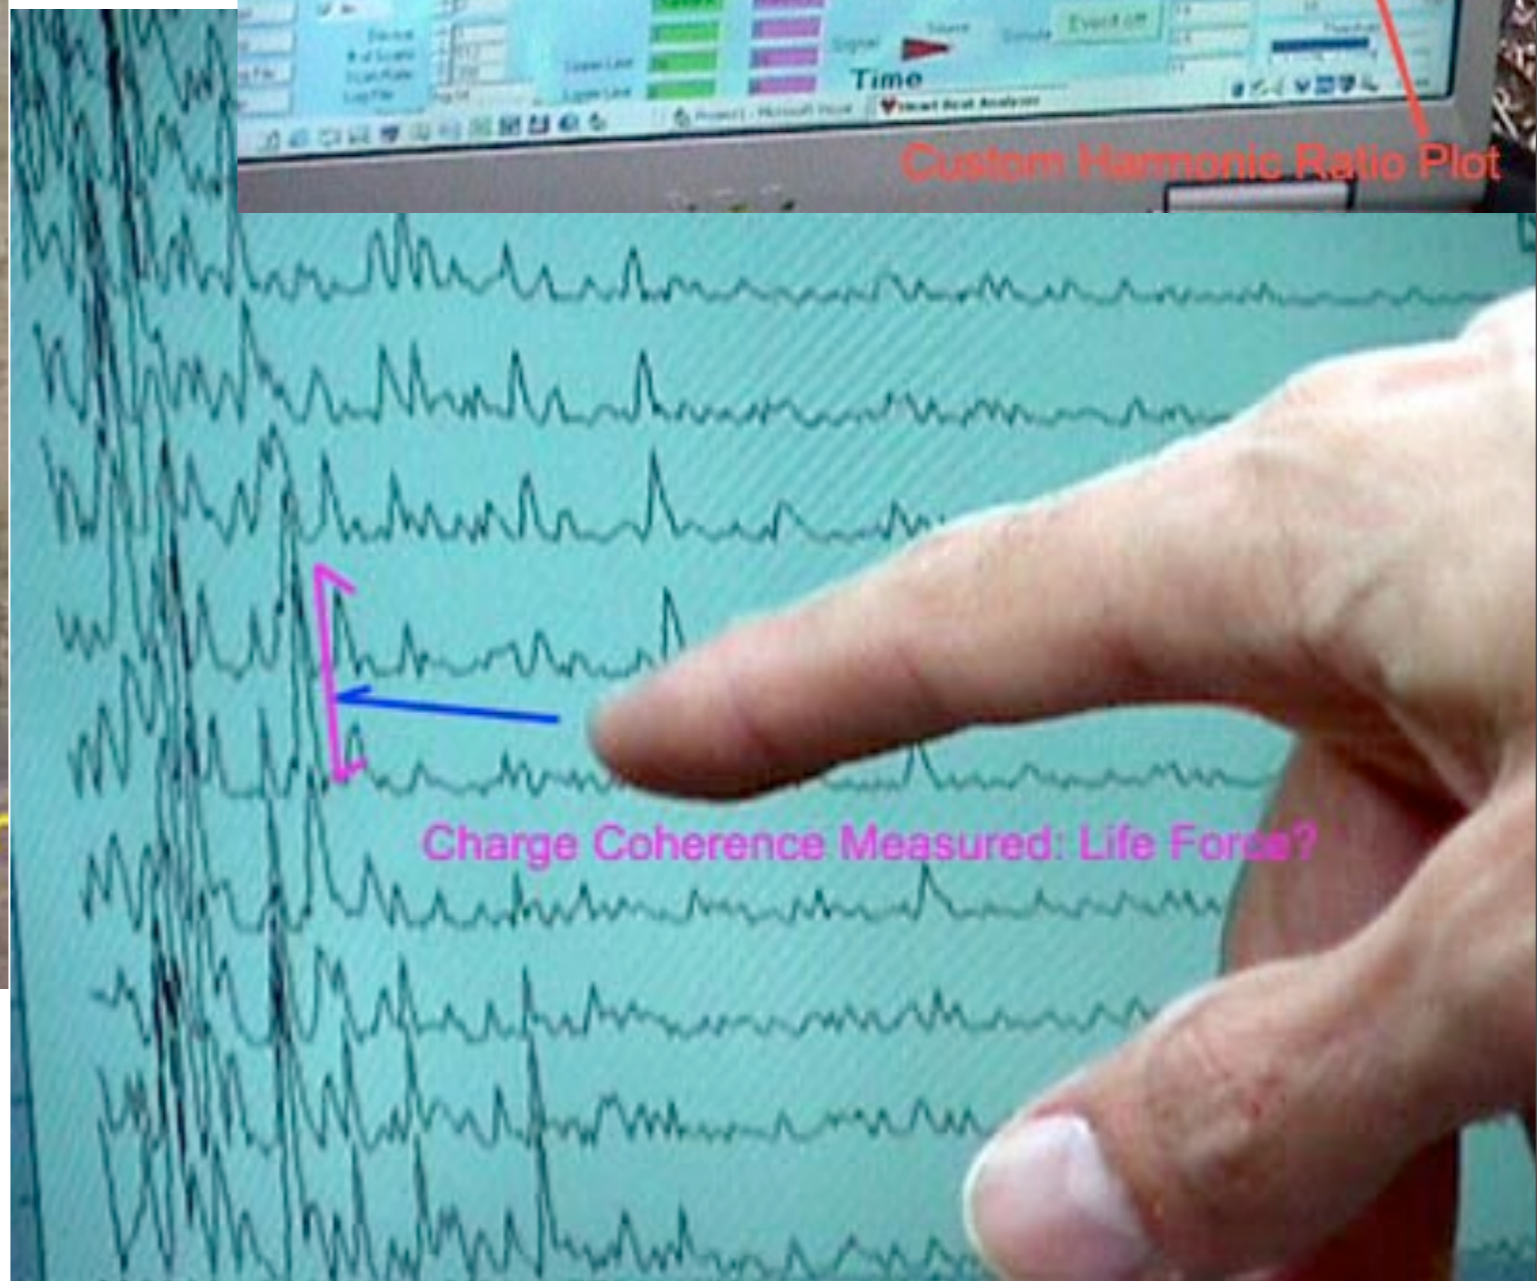

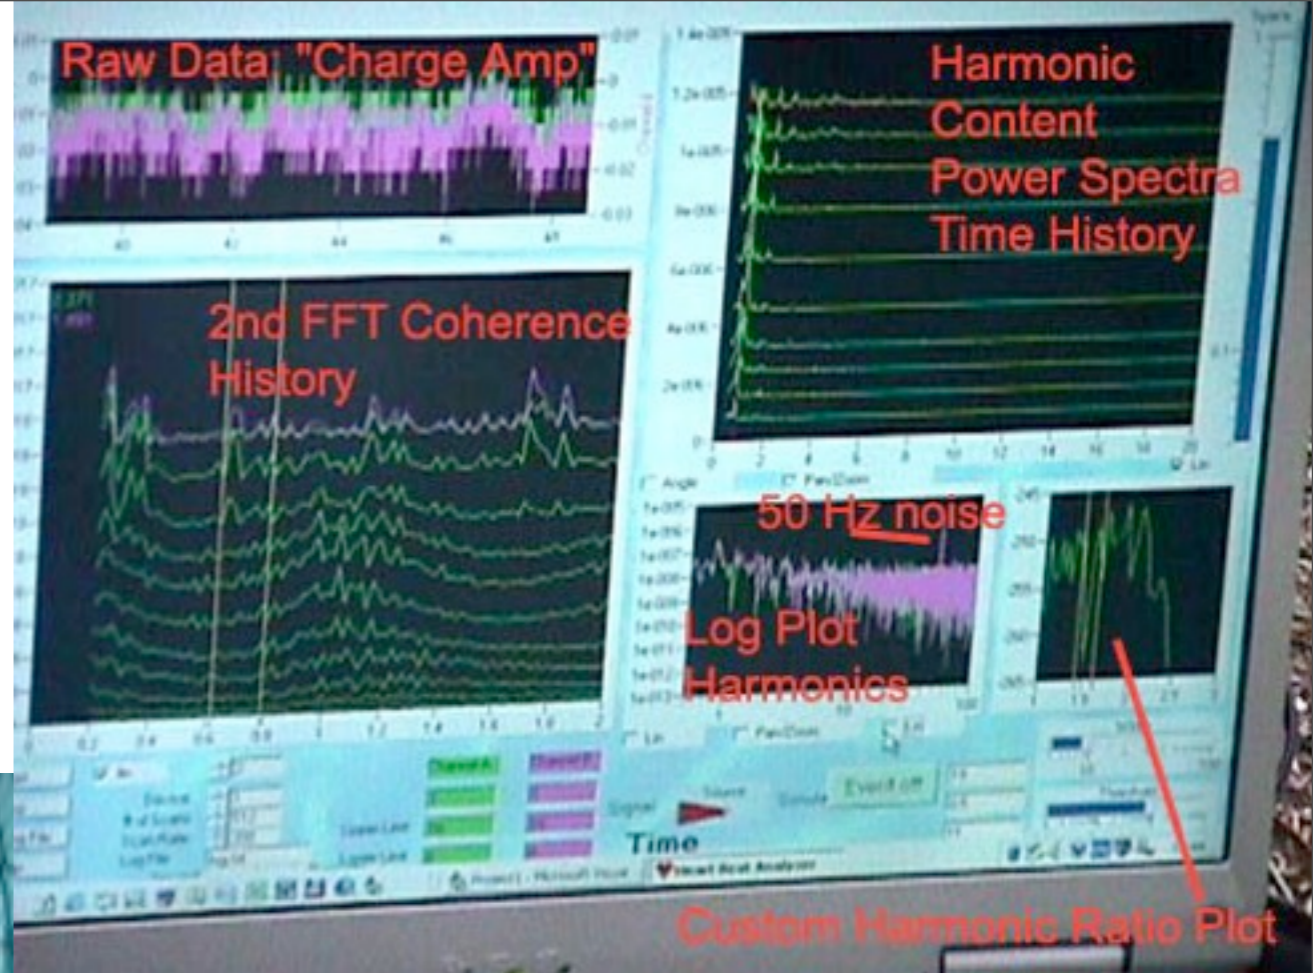

**T**HE PURELY BIOLOGICAL AMBIENT sounds of our habitat are extremely hard to find these days. All but obscured by human-induced masking noise, these creature voices are trying to tell us in their own way something we haven't yet learned. The message is subtle. The theme is life, itself. R. Murray Schafer, the Canadian sound environmentalist who worked on the World Soundscape Project during the '70s, said in reference to the importance of sound in our lives, "Everything that...

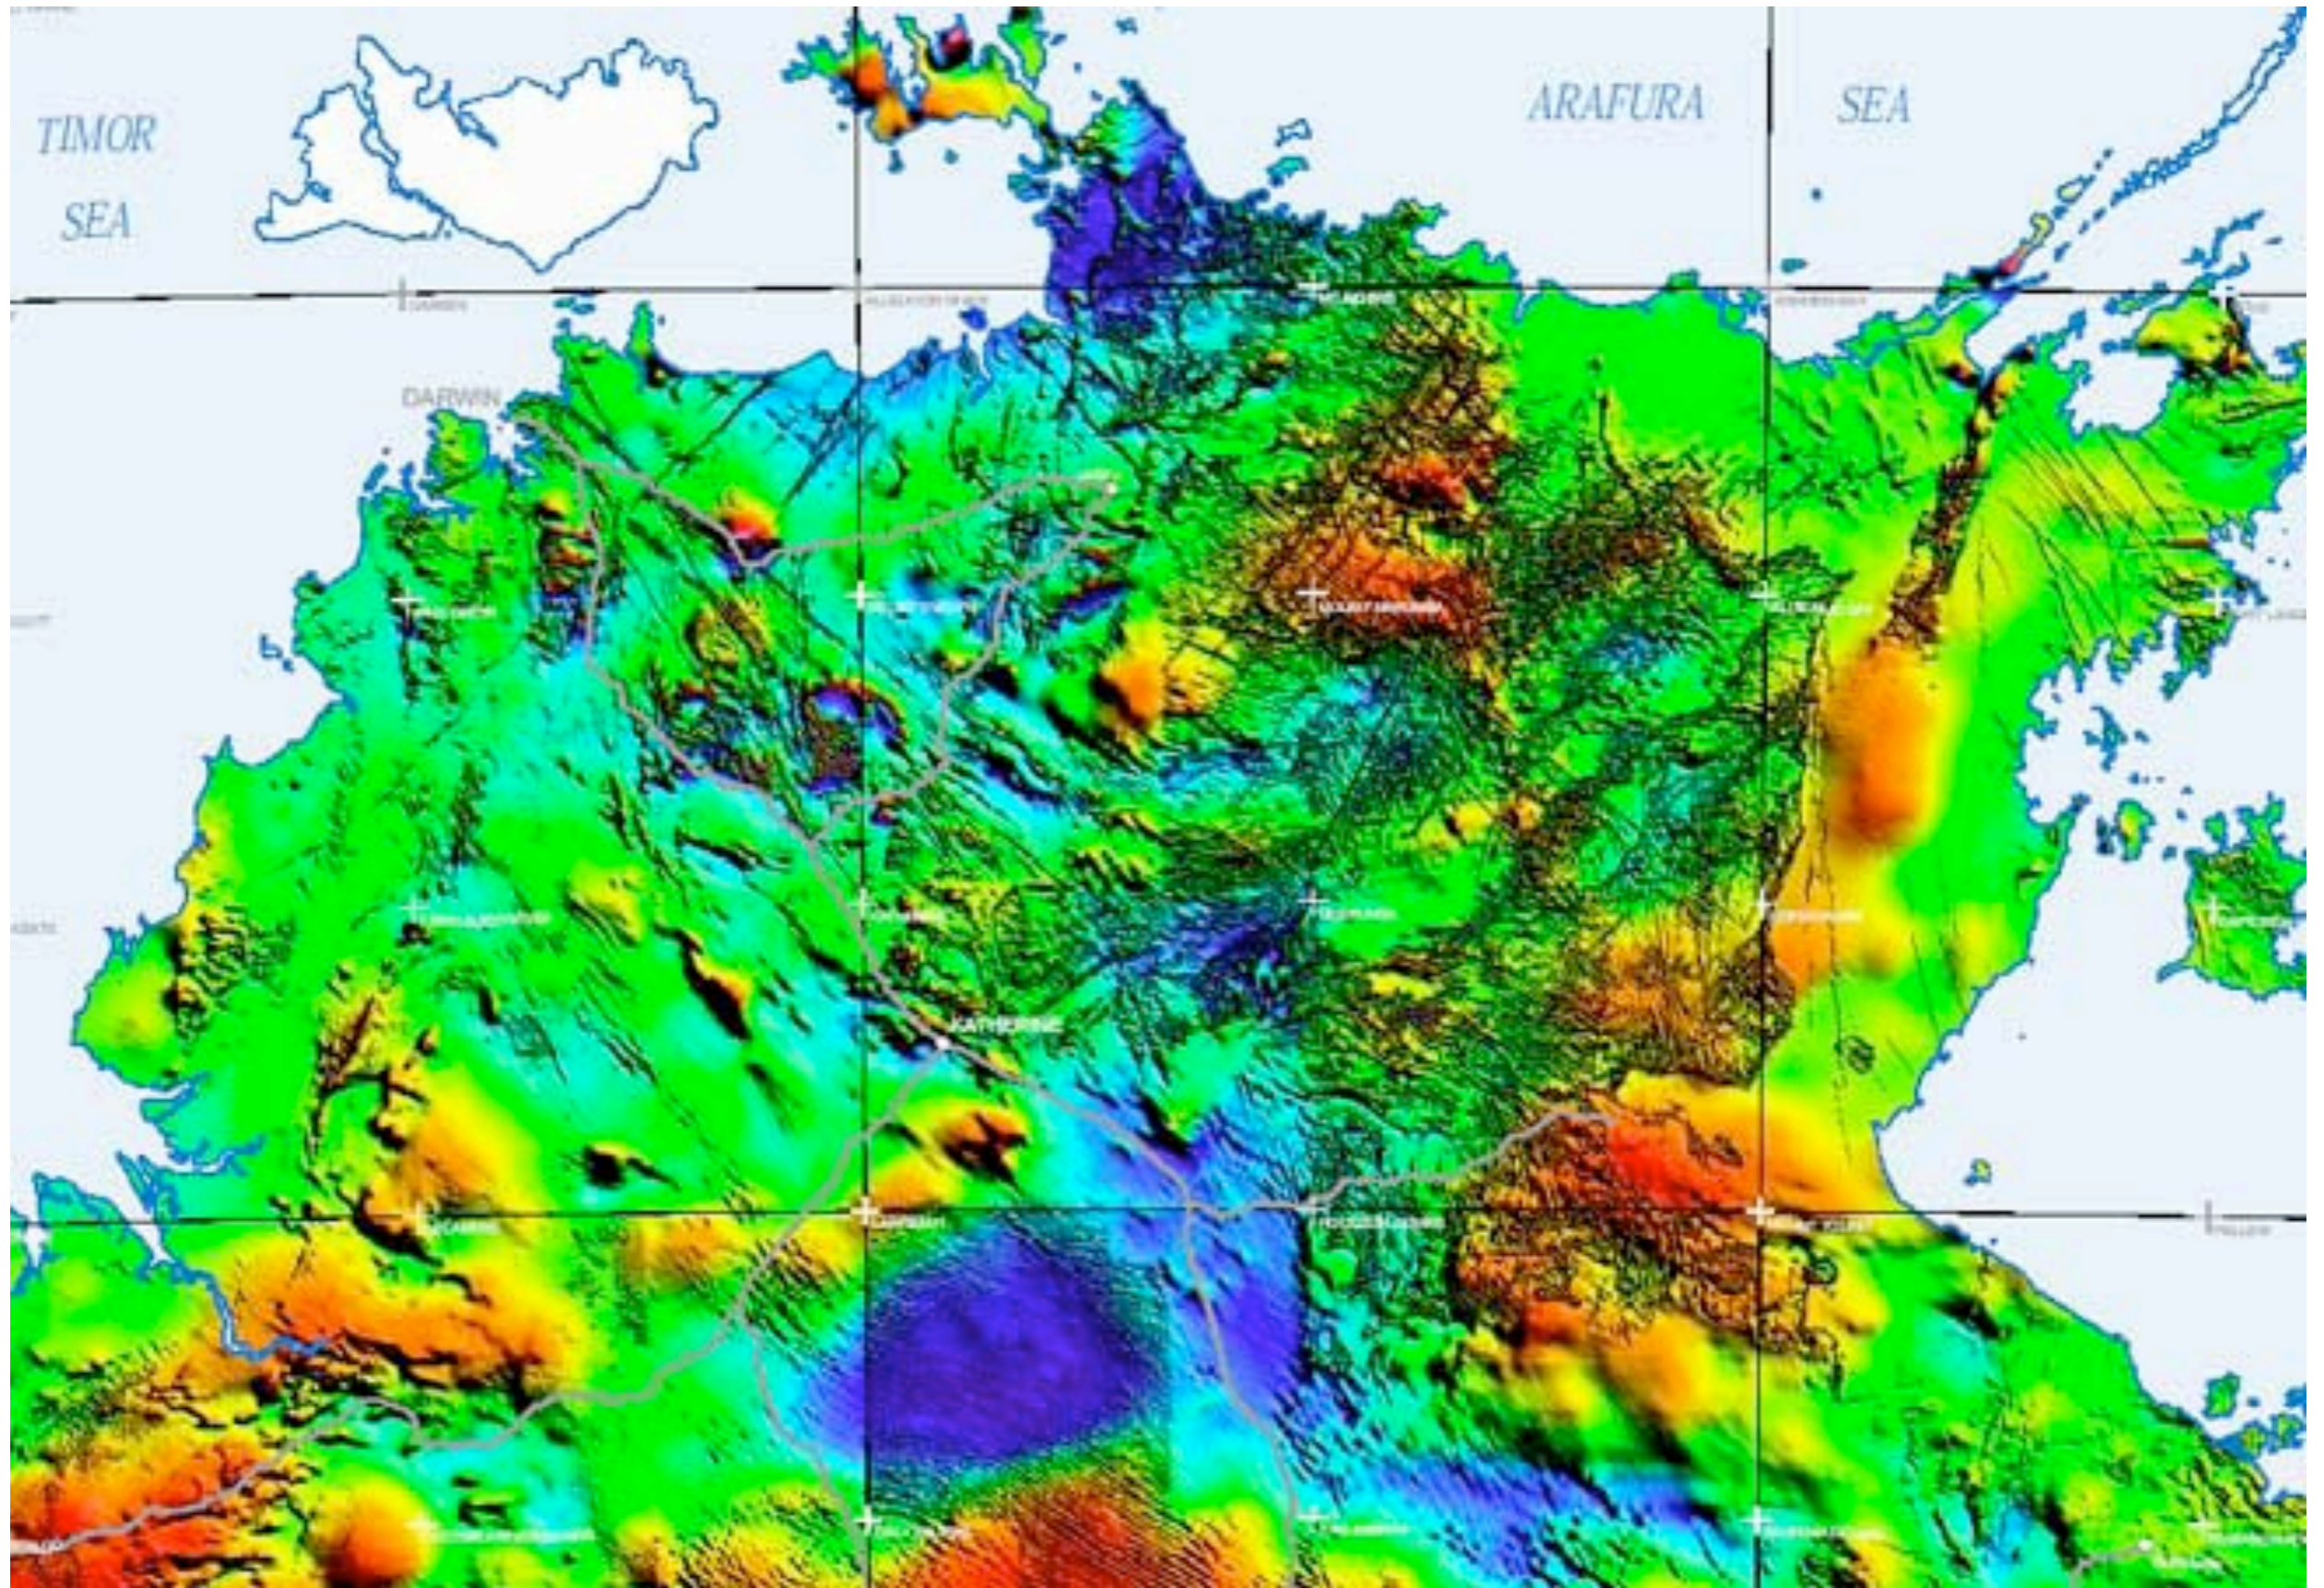

to emulate the sounds of birds and land animals. They had learned what animals instinctively knew. Their lives often depended on sound as well as sight. Even when there was little or no light, a message could always be transmitted through the air by sound. Aristotle was the first Western person to write about sounds underwater. And 2,000 years later, Leonardo da Vinci (1452-1519) found a way to hear the sound of ships at a distance and very probably the sound of marine mammals...

The rocks in the bay, always black before my eyes.  
Started turnin white - on the day she passed away.  
From the summit of the northern slope of the southern peak.  
As she was passing over, before she was laid to rest,  
So to; the northern rock was lit  
Up on the ridge where the north and south winds meet,  
I saw her radiant and child like face.  
And these words I heard her speak:  
"It's only for eyes that can see, Grace, only for eyes that can see."  
I knew she had fulfilled her task, to open up the line,  
And in that moment of understanding, something deep sunk in.  
Before my eyes a luminous light that traveled a great speed,  
eminated from those rocks up to the top  
and all the points around this vast land.  
The day they took her body back up the story line to Woodenbong  
The winds came up behind her and the rain it pelted down.

THE GOLDEN MEAN PROPORTIONS OF THE SOLAR SYSTEM  
 The mean proportions of the solar system are shown by the following construction in the orbit of Neptune. Draw the diagonals of this pentagon; a smaller pentagon is inscribed in the orbit of Saturn. The next smaller pentagon, generated from the diagonals of the orbit of the Asteroid belt. If we now inscribe a further pentagon inside the outermost of its first "daughter" pentagon exactly circumscribes the orbit of the Earth.

Golden Spiral. De Spiral kan naar binnen gericht zijn, soms naar buiten; de chart kan betrekking hebben op dagen, maar ook op jaren. De grafiek van de Dow Jones Industrial Index (*Illustratie 2*) over een zeer lange periode vormt hiervan een voorbeeld.

De Golden Ratio is ook te herkennen in de opbouw van cycli. De meest eenvoudige vorm is, een daling en een stijging, totaal 2 bewegingen. De meest eenvoudige samengestelde vorm is een daling bestaande uit drie bewegingen (twee omlaag, afgewisseld met een technisch herstel) en vijf omhoog (drie stijgingen, afgewisseld met een tweetal technische reacties) totaal acht, ofwel 3, 5, 8 uit de Fibonacci-reeks. Zo kunnen wij doorgaan. (*Illustratie 3*)

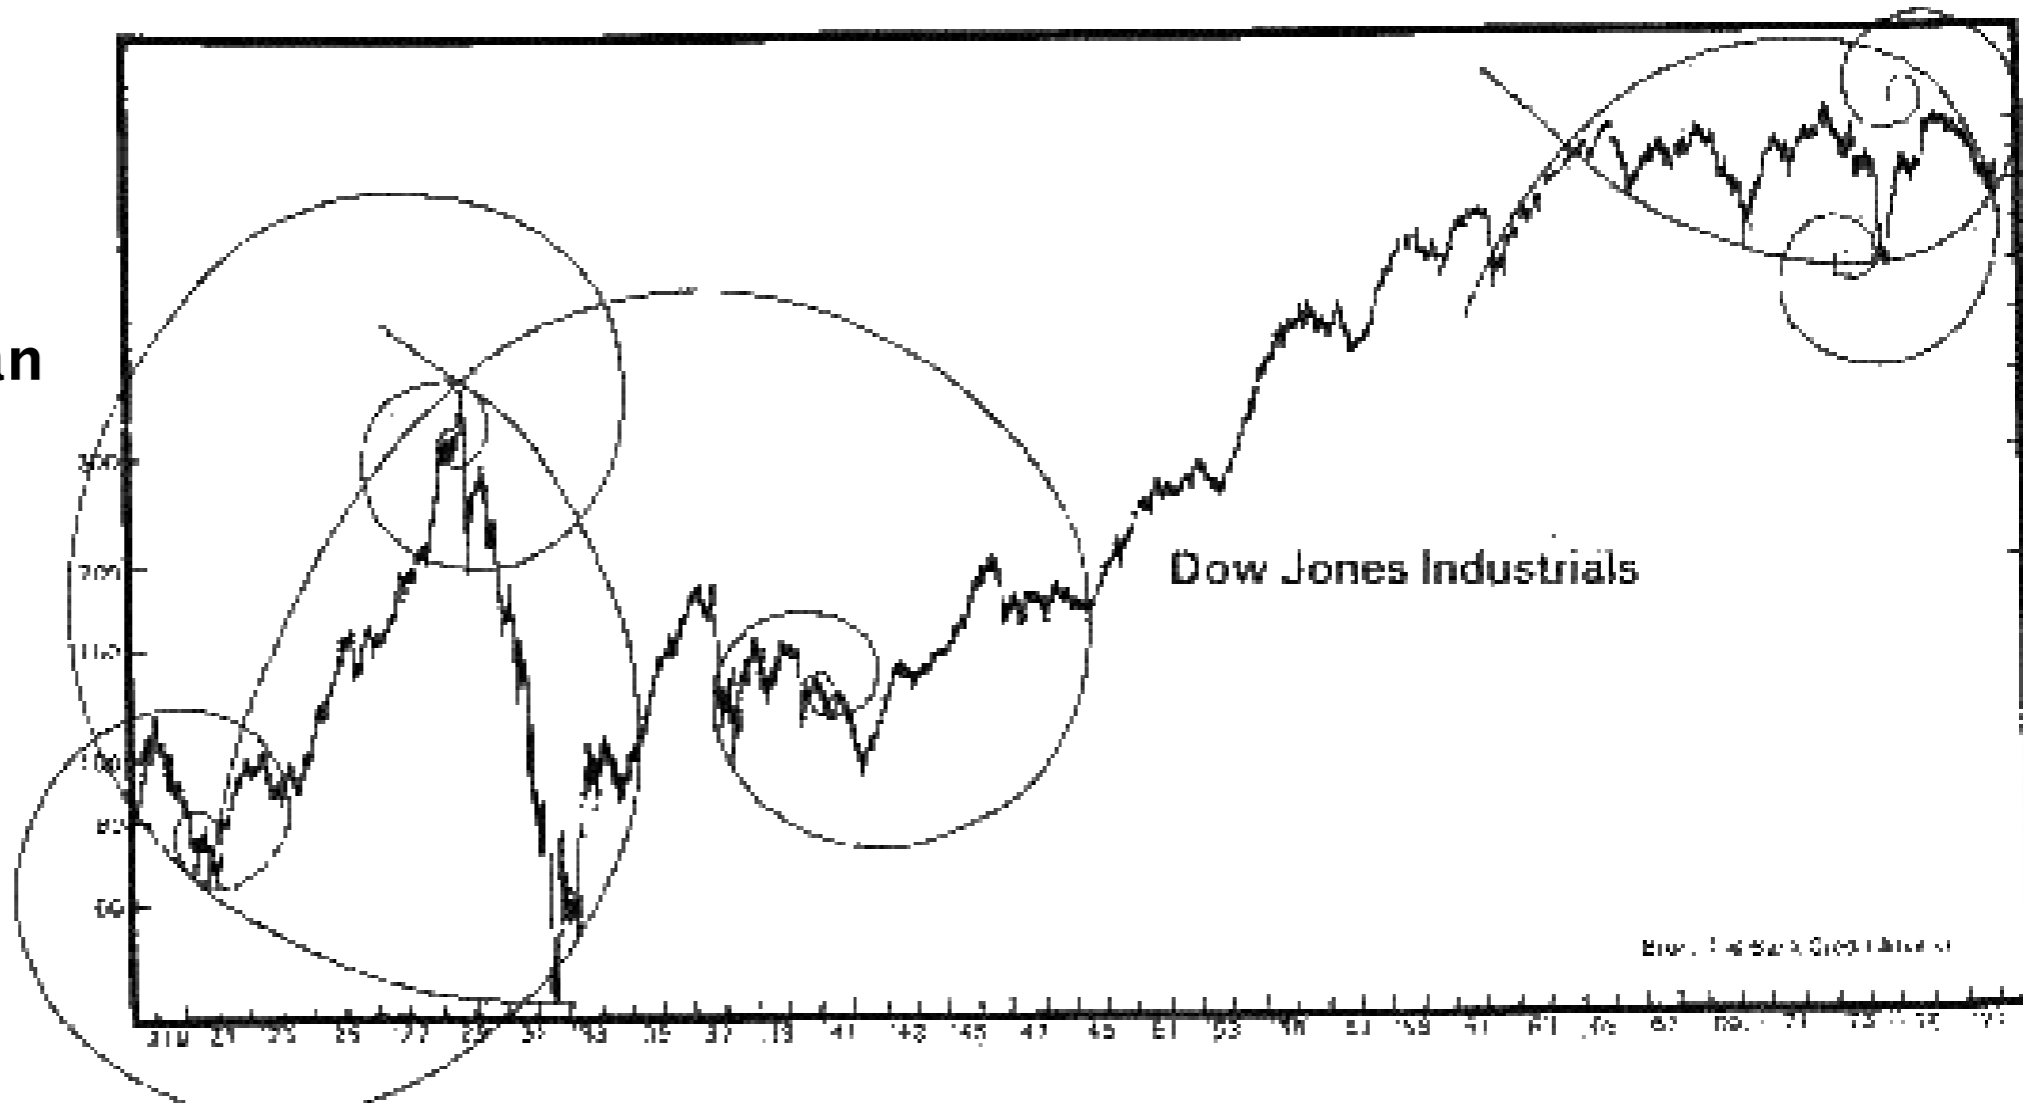

$$\frac{R2}{R1} = \frac{R3}{R2} = \frac{R4}{R3} = 1.618$$

De grote vraag is uiteraard welke de praktische waarde is van de Fibonacci-reeks voor de belegger. Geconstateerd moet worden dat vooral achteraf een opmerkelijk aantal herkenningspunten aanwezig blijkt. Op het moment dat deze zich voordoen blijken deze echter veel moeilijker te definiëren:

De theoretische Golden Ratio succesvol te werken is een flink ring nodig. Zelfs lieden die zich uur met het toepassen van de theorie en de Fibonacci-getal zighouden, blijken daarbij op menten de plank veelal mis te wel de Elliott Wave theorie en gekoppelde toepassing van de getallenreeks de laatste jaren doet menen wij dat ook voor ring geldt dat deze niet feil slechts gezien mag worden al vele hulpmiddelen waarvan zich kan bedienen. De Fibonacci-dingentabel kan een praktisch vormen. (*Illustratie 4*)

‘Ethereic Formative Forces’ (Steiner) are electrically described as Symmetry lines (Projective Geometry) which allow (Capacitive) CHARGE - to unpack as wave- constructively into Space.

Their self-organization by Implosive Compression - is called  
Conscious Self-Awareness  
(Symmetrically -from the Vedas: Ability to Self Refer..)

The Steiner student accurately visualizes a sequence of time lapse drawings of a bulb becoming a flower.

. The room FILLS with a *love growth urge* in all present there.

Then the same student accurately visualizes that rose stepping toward wilt and death -and the feeling in the room changes dramatically.

# Attraction Due to Gravity

**Self Similarity (Golden Ratio)  
Creates Gravity because  
Infinite CONSTRUCTIVE  
Interference of (charge) wave  
VELOCITIES - turns Compression  
In to ACCELERATION (Gravity).**

**So the REASON an object falls to the Ground is:  
charge is being Sucked out  
thru the speed of light.  
This explains (Golden Ratio in)  
DNA's role in Fabricating gravity.**

"Sine Waves"

PERMITS ADDING  
AND  
MULTIPLYING  
OF WAVES

GOLDEN MEAN RATIO

**Charge Acceleration Due to Self-Similarity.**

**"The self similarity of the inside to the outside  
Predicts the amount of gravity created by  
Atoms, DNA, Planets and Stars".. Winter**

**Tachyon Energy: When Golden Ratio Charge Self Similarity turns compression in to Acceleration - the resultant phase velocity constructive interference- produces connection to faster than light speed (meaning of Tachy-an) .**

**This Implosion / Fusion effect should never be called unlimited or 'free' energy because it is limited by the fractal coherence (collapse) of charge -called the gravity field itself. Organic material (in architecture of sacred space) for example- produce this effect (fractal) because the capacitive or electrical property of biology in general is FRACTAL - and therefore PHASE CONJUGATE (visualize caduceus).**

**Gravity is the magnetic monopole of infinite (fractal) charge collapse - due to this effect: self similarity heterodynes phase velocities constructively turning compression in to acceleration / gravity. In this way when charge gets a way out thru light speed the centripetal charge suction to center - centering force - acceleration to center- defines gravity. The amount of gravity in anything (atom/ DNA/heart/planet/galaxy) is limited by the collapse inviting self-similarity of its inside to its outside.**

**The turn orgone for example is a misnomer for directionally recursive capacitance - typical of molecular geometry which has been arranged into a fractal to breathe charge efficiently - thereby defining all biology electrically: Perfected charge distribution - storage goes to zero when fractal compression allows fractal charge radiance - also defines abundance in economics.**

- 2. "Sucked DOWN THE DRAIN?" - New information for physics: things fall to the ground because self-similarity makes a drainhole for charge out thru the speed of light. (Einstein WAS right that the symmetry of infinite non-destructive compression was the key to the continuum of electric charge to gravity - he was wrong not to see this demonstrated in the symmetry of every plant phylotaxis. )
- 3. Einstein's theory that accelerating charge thru the speed of light requires infinite energy - is proven wrong by every living protein. Living and fractal structures like pine cones, and the self-similar electrical fibres where the heart gets voltage from gravity to fire (perkinjole), and the self similar branches (alveoli) of the lung - create life because they implosively attract (capacitive couple) charge (from the gravity field).
- 4. Therefore we add - that self-similarity in biologic capacitance - is the CAUSE and maintainer of life- because this creates perfected charge distribution (earlier called the 'breath of life' or spirit). Logically extending the Vedic notion that the ability to self-refer defines consciousness, we now see that it is moreover - perfected (fractal) compression of charge which creates the perfected distribution of charge - which defines consciousness itself. (explaining for example why conductivity measurably improves when impressed with human 'intention' in Bill Tiller's latest book).

- 4. That DNA becomes stronger every time it enters biologically fractal (successful charge compressing ) environments - and weaker (dies a little) - every time it enters fractionating (non-fractal ) charge environment. In practice this means sacred space - caves, stone circles, labyrinths - enable life by compressing charge (biologic information) successfully into DNA. And the opposite is true - that persons who persistently inhabit bleeding capacitors ( metal buildings, capacitive charge depleted air {air'conditioning'} etc., non-fractal electromog) will electrically shorten the life /implosion of their DNA.

- 5. That DNA - in the necessary and survival required process of becoming electrically sustainable - must

The blue ultraviolet- FLASH ( moving toward faster than C lightspeed)

- **6. That all systems which become self-aware and thereby apparently self organizing do so specifically by arranging themselves into the optimized charge distribution which results from Golden Ratio fractal compression - accounting for Golden Ratio in phylotaxis, in every (Pent) living protein, and the (Golden) spiral nature of star systems, galaxies and time itself. (aka Carolan book: 'SPIRAL CALENDAR' )**
- **7. That apparent synchronicity, and the inhabiting of time ( a measure of relative rotation) is only sustainable when time (the symmetry of event histories in time) is also Golden Ratio and fractal.**
- **8. That all parts of life which do not ultimately obey this simple law - get charge fractal or die ( - like most poisonously metal - refrigerators, buildings, cities, and bioregions on Earth today - ) will die sooner rather than later. ( list of materials that create fractal and therefore sacred charge space for architecture- and all life - - see : [soulinvitation.com/architecture](http://soulinvitation.com/architecture) )**

# CAPACITOR ARRAY GRAVITATIONAL WARP DRIVE ENGINE

Round off the corners of the plates to slow down electrostatic leakage.

Use waxed paper for the dielectric. Cut it into rings, as illustrated, with large hole in center. Use TIN foil (NOT aluminum) as "plate" material. Make sure to "center" the plates on the dielectric, so as to leave ample margin between outer and inner edges of the dielectric, as this is vital to proper functioning.

Connect the plates to each other using very thin strips of tin foil, laid on top, and set toward the outer edge, but not going beyond the edges of the plates. Leave a long, thin strip of tin foil, laid on top of a plate, and extending out, to be used for charging the array.

You will have to stack hundreds of such layers (use TWO waxed paper rings on each layer)

Leave the positive charging strips aligned on one side of the array, and all the negative strips aligned on the other.

When the array is completed, you just roll and crimp them together, in bunches of two dozen or so, tack them with solder (don't damage the dielectric)

Curved plates work better than rectangular. Round off corners on curved plates, as well as

Experimental Implosive Capacitive Circuit  
Sept 05 - Triggered Storm as it was first Energized..

**The Word 'Relativity' is obsolete to describe the relationship of mass to energy because that relationship (which allows charge to compress and thus be called MASS) is more precisely FRACTAL. Namely: self-similarity perfected allows charge (energy) to compress (non destructively) and thus become MASS. Fractality (of charge) creates MASS , life force, and self-organization (because that is what permits implosion). That path permitting non-destructive charge compression simultaneously produces charge ACCELERATION - (recursion in velocity heterodynes) which is the only source of the phenomenon called GRAVITY.**

*Arranging capacitors (in concave array / toward recursion) to fabricate gravity has been done many times (Searl, Townsend Brown et al. , & in Stealth aircraft - predicts the death of rocketry) - Winter is merely the first to describe the principle which caused it.*

**E=MC<sup>2</sup> merely quantified the obvious that inertia storage - called 'mass' was only a function of sustainable wave rotation.**

**More interesting / and from the point of view of electrically supporting the creation of life force - probably more useful - we now know: Gravity, Implosion, and Self-Awareness = Charge Acceleration thru C by Wave Self-Similarity - FRACTALITY ! = (Potentially infinite wave multiple-connectedness by CONSTRUCTIVE COMPRESSION)**

Vivaxis derives from "life" and "centre" and it refers to a unique energy flow that connects an individual's energy field or etheric body with that of the Earth at the time of birth. The link functions as a two–way connection between the individual and their place of birth and the connection remains even as an individual moves. Each person's circuit has a unique individual frequency. The Vivaxis connection can be harmed or distorted by chemicals, electromagnetic fields or even lightning. It is believed that a disturbed Vivaxis connection can make an individual ill but restored and vibrant, the connection can keep a person healthy. ".. end quote**

that the daily and monthly tides involve forces which are related to magnetic north and south. Her use of the terms gravitational and magnetic do not always correspond with the usual scientific understanding.

Much of this book is concerned with exploring the Vivaxis energies which appear to be those etheric forces which connect us with the earth in a two-way circuit which flows up one side of the body from the Vivaxis, and back down the other towards the Vivaxis (see Diagram 1). No matter how far we travel from our Vivaxis, we remain connected and can be recharged via its connection to the earth. However, there are many forces both electromagnetic, chemical and psychic which can interfere with our Vivaxis channel and it is important to be able to diagnose and clear ourselves of these disturbances. In chapter 5 we will take up the subject of the Vivaxis in further detail with exercises for finding its direction and use.

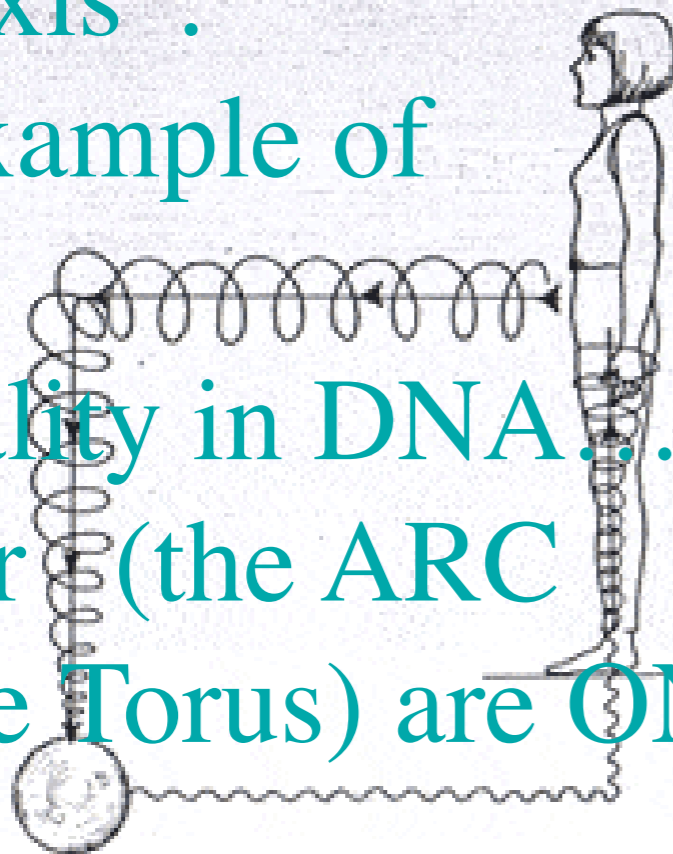

In the meantime, with the above thoughts in mind, we start in

this chapter to explore our life energy as it relates to mother Earth and to explore some techniques which will help us to absorb the life-giving energies of our planet.

As a natural therapist I have used therapies for decades to give people more energy. However, in conjunction with our psychological state, our basic physical lifestyle and environment must always be understood as the backdrop for any therapeutic aid. If we compromise the integrity of our body energies, the effect of vitamins, minerals, herbs, homeopathy, or Vivaxis energies is greatly diminished – like pouring water into a bottomless pit. Some of the ways we diminish our health include poor diet, a noisy and polluted environment, introducing conflicting energies from man-made electrical sources, and negative thoughts and emotions. So our first task on the road to better health is to free the body from those disturbances which cause a conflict of energies.

## OUR FACULTIES FOR FINDING PLANETARY DIRECTIONS

We have looked briefly at the subtle parts of our constitution and at the concept of human beings, and Earth, having interconnecting and interpenetrating energy fields. We have highlighted the role of energy in both the macrocosm (planet) and microcosm (man). I believe that in the future human beings will learn much more about themselves in both magnetic and electrical terms. However, we must not be restricted to the present understanding and measurements of physics. There are electrical polarities and magnetic affinities and fields at the etheric and more subtle levels and our physical instruments can only take measurements indirectly. In this book you will learn to use your body as an instrument for sensing and testing these energies.

As suggested, we already experience ourselves as being composed of many subtle interacting fields and vehicles. Therefore we can use our own etheric body as an instrument for evaluating etheric energies. We can devise and repeat experiments where we can check our findings with others and thus bring repeatability and cross-referencing into our research. We can even devise experiments where neither the tester nor operator knows the nature of the materials being used – the famous double blind trials of medical science. In other words, we can work in a scientific manner using our body as an instrument.

Careful discrimination will enable you to distinguish between

# Real-time ULF and ELF signals as recorded by ELFRAD

This is a plot of ULF transmissions recorded from an antenna array, which detects signals which travel through the earth. The center frequency is 1.618033 hertz with a bandwidth of only .02 hz. This signal which is sometimes called the "Golden Mean or the Fibonacci Sequence", occasionally is detected in high amplitude bursts.

**When Einstein commented that a magnetic monopole (wormhole) WAS the relationship of gravity to charge - he foretold a clue to his own dilemma: WHAT IS THE GEOMETRY OF INFINITE COMPRESSION? He knew THAT geometry WAS the connection of electromagnetism to gravity.**

Compression gravity txt

**Faraday's observed that: 'Electrical capacity is to gravity as inductance is to magnetism'. ....He concluded the energy stored in a capacitor is in the form of a GRAVITATIONAL field.**

**Townsend Brown also found in charged capacitors that weight reduction only occurs when the positive plate is upside to the negative plate. .... If the negative plate is above then the device inceases in weight . Dan Davidson et al then observed that the AMOUNT of weight change is greatest if a SMALLER CAPACITOR is nested under the larger!?. The obvious next experiment is to nest capacitors in the (Golden) ratio of recursion/embedding, to PRODUCE OPTIMUMCHARGE COMPRESSION & THEREFORE THE GREATEST GRAVITY!#(Capacitors in Phi array - produce 'ion effect')**

**To solve the unified field, understand the geometry of compression.**

**Compressing charge stores the inertia of that charge, which physics then calls 'mass'.**

**Waves use PHI recursion to send a portion of that inertia thru light speed at the implosion center, to produce the magnetic monopole which was Einstein's name for gravity. Like pulling The drain in the bathtub - a way out thru light speed creates the wind of charge:gravity.**

**Unified physics: to embed yourself into that vortex wormhole tornado, is the role of mind among waves (why MIND inhabits PHIRE).**

**People lose weight measureably at the instant of death - Radioactive half life is measureably reduced by focused human attention. Restoring the charge fractality keeps a little tornado vortex better centered in a bigger tornado. That centering force IS gravity, and IS the proof that attention IS the creation of charge**
